#### **DETAILED ACTION**

Page 2

#### Election/Restrictions

1. Newly submitted claim 8 is directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: claim 8 direct to a method for controlling a transmission energy of a communication station comprising the steps of increasing the transmission energy of the communication station by a first amount, decreasing the transmission energy from the first amount at a first predetermined rate for a period of time, and decreasing the transmission energy at a second predetermined rate after said period of time.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim 8 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/901,835 Page 3

Art Unit: 2685

3. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Henriksson (5,128,965).

As per claims 1-7, Henriksson disclosed a method for controlling transmission energy associated with generating and processing a signal indicative of a characteristic of a propagation path between a communication station (see fig. 1/no. 1) and a second communication station (fig. 1/no. 2), comprising transmitting the signal indicative of the characteristic to the communication station along with power adjustment requests from the second communication station, receiving the signal and power adjustment requests at the communication station, setting a transmission power level at the communication station in accordance with the received signal for a predetermined time period, and modifying the adjusted transmission power level in accordance with a step size (fig. 4, col. 6/ln. 25-65, col. 7/ln. 41) corresponding to said characteristic and to modify the adjusted transmission power level in accordance with the closed loop power control commands (where it is clear that in a closed loop power control implementation, power control signals are provide from a mobile station (fig. 1/no. 2) to a base station (fig. 1/no. 1) and the base station responds by adjusting the power transmission level accordingly).

### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pablo Tran whose telephone number is (703)308-7941.

Application/Control Number: 09/901,835

Art Unit: 2685

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Edward Urban, can be reached at (703)305-4385.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal

Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
